

9 inch rock auger bit

What are rock auger bits?

Rock auger bits are bits with a reinforced fabricated boring head, double wrapped flighting, and conical carbide teeth. They have a standard 'fishtail' center point and are not intended for use in concrete or asphalt applications.

What size auger bit is required?

Auger bits have a diameter of up to 80mm. They can be custom made to lengths of up to 2500mm. Auger Bits are indispensable if you need to drill especially deep holes into wood. The size of the auger bit determines the diameter of the hole. They have a large coiled chip space, whereby the chipped wood are carried out to the tool shank during the drilling.

How many carbides does a 9 inch Auger have?

The 9 inch McMillen Rock Ripper Auger has a total of 10 carbides, with 4 on the nose and 3 on each flight.

Will a rock auger fit a portable hand held Digger?

A: Sorry, we don't carry rock augers that will fit on a portable hand held digger. We sell hand held post hole diggers but the augers aren't rock augers. Very light weight but typical for the machines. Helpful? Q: What is the item# or part# for the adapter that will allow this to be used with a 3 point post hole digger?

What is an auger bit file?

An auger bit file is a special type of file with single-cut teeth at either end. At one end, the wide flat faces have teeth, while the edges are smooth without teeth. At the other end, the edges have teeth and the faces are flat without teeth.

How deep should a bedrock Auger be?

The typical depth in the rock was about 24" -- the frost line here is 48", but bedrock does not heave, so there was no need to make the holes any deeper. The hardest part was keeping the auger centered, so when there was dirt on the bedrock, I first used my dirt auger as it does not wander in dirt as a rock auger does.
