

Active drilling rigs in utah

What is a drilling rig?

A drilling rig is an apparatus constructed for oil drilling. The term "rig" generally refers to the equipment used to penetrate the Earth's crust. Oil and natural gas drilling rigs are used to identify geologic reservoirs and create holes to extract oil or natural gas from those reservoirs.

Where is Utah ranked in oil & gas production?

Utah is ranked #12 in the US based on Barrels of Oil Equivalent (BOE) produced in Jan 2025. You will also find information on the producers of wells as well as recent drilling permits, rigs and production data for producing wells which start in Feb 1927 and go through Dec 2024. How does Utah rank in the nation for oil and gas production?

What does active rig count mean?

When drilling rigs are active they consume products and services produced by the oil service industry. The active rig count acts as a leading indicator of demand for products used in drilling, completing, producing and processing hydrocarbons.

How do oil and natural gas drilling rigs work?

Oil and natural gas drilling rigs are used to identify geologic reservoirs and create holes to extract oil or natural gas from those reservoirs. Onshore oil and gas fields typically have a larger rig that drills a well, which is then replaced with a smaller service rig that gets the well online.

How many oil rigs are there in the US?
