

Boremaster hydraulic trailer mounted drilling rig

How deep can a boremaster rig Drill?

A: The BoreMaster Standard Rigs are capable of depths up to 300 feet deep, although the average depth of most water wells is less than 100 feet. Many good water bearing formations are located at around 50 to 75 feet. Is it possible to drill deeper than 300 feet? It is possible, but other factors will need to be considered.

What type of drilling method does a boremaster use?

A: The BoreMaster features the rotary drilling method, the most modern method of drilling for water today. It is fast and efficient and until recently it was only available in large, expensive, truck rigs.

How does a boremaster drill work?

The BoreMaster consists of a rotary drill powered by a gasoline powerhead with an earth cutting bit attached to a five foot length of hollow drill stem. As the bit cuts into the earth, water is pumped through the drill stem with the high pressure mud pump and out at the bit, washing the cuttings up and out of the borehole to the surface.

What are the advantages of a boremaster rig?

The biggest advantage of the BoreMaster is that it is portable and lightweight, easily transported into back yards, hunting camps, gardens, under trees, etc., and unlike the big truck rigs, it doesn't destroy the landscape. Q: What is the difference in these portable rigs, and the big truck rigs, can you drill as good a well as the big trucks do?
