

Caspian drill rig market

What percentage of Caspian oil is offshore?

Offshore fields account for 41% of total Caspian crude oil and lease condensate (19.6 billion barrels) and 36% of natural gas (106 Tcf). In general, most of the offshore oil reserves are in the northern part of the Caspian Sea, while most of the offshore natural gas reserves are in the southern part of the Caspian Sea.

Are there oil and natural gas reserves in the Caspian Sea?

Significant oil and natural gas reserves exist from both offshore deposits in the Caspian Sea and onshore fields in the Caspian basins. Traditionally an oil-producing area, the Caspian area has more recently grown as a natural gas producer.

Why are Caspian oil & natural gas fields so expensive?

Caspian oil and natural gas fields are relatively far from export markets, requiring expensive infrastructure and large investments to transport produced hydrocarbons to markets.

Is the Caspian Sea a natural gas producer?

Traditionally an oil-producing area, the Caspian area has more recently grown as a natural gas producer. The Caspian Sea region became a significant source of oil production for the Russian Empire, and subsequently the Soviet Union.

Where is Caspian oil produced?

As Azerbaijan developed the Azeri-Chirag-Guneshli (ACG) field group between 2006 and 2008, its offshore production began accounting for an increasing part of total Caspian production. Other significant sources of Caspian oil include production in Turkmenistan near the coast and in Russia's North Caucasus region.

How much oil does the Caspian Sea produce a day?

EIA estimates that the Caspian Sea region produced an average of 2.6 million barrels per day of crude oil and lease condensate in 2012, around 3.4% of the total world supply. Over the past decade, Kazakhstan's onshore oil fields, particularly the Tengiz field, were the biggest contributor to the region's production.
