

Caspian rig exploratory drilling expensive

Is the Kashagan project a good investment in the Caspian Sea?

The Caspian Sea region has recently become a new point of interest for oil and natural gas production. The Kashagan project, which has become the region's prominent oil extraction scheme, has received a greater amount of attention and investment.

Why did oil production decrease in the Caspian Sea?

During the second part of the 20th century, interest in oil production in the Caspian Sea area decreased as a result of slow economic growth and increased attention towards other oil-rich locations.

What would happen if the North Caspian Oil Company did not meet its target?

If this target was not met, the consortium would have had to give up its compensation for the costs they incurred. The North Caspian Operating Company (NCOC), now headed by the Italian oil company Eni, also recently began its hydrocarbon production from Kashagan.

How much oil does the Caspian region produce a day?

The EIA estimates that the Caspian area produced an average of 2.6 million barrels per day of crude oil in 2012, which amounted to about 3.4% of the global supply, with just over a third of that being extracted from offshore fields. "The EIA estimates that the Caspian area produced an average of 2.6 million barrels per day of crude oil in 2012."

How much oil is in the Caspian basin?

The US Geological Survey (USGS) has estimated that around 20 billion barrels of oil and 243 Tcf of natural gas may exist in the region. Much of it is believed to be in the South Caspian Basin, which has remained unexplored because of territorial disputes concerning offshore waters.
