

Causes of voltage overload of screw air compressor

What are the common faults of screw compressor?

There are three common faults of screw compressors: motor overload, high temperature, gas-guzzling. 1. Main reasons of motor overload are as follows: Three filters (air intake filters, oil filters, oil separator) severe blockage ...

What causes high temperature in a screw air compressor?

2. Two main reasons lead to high temperature: Oil filter clogged, thermostatic valve spool jams, internal or external oil cooler is seriously polluted. Oil filter and oil cooler mounted thermostatic valve upstream of the oil is an effective way to avoid failure, but most brands of screw air compressors' oil filter only be protected for air end.

What are the most prone failures of screw air compressors?

One of the most prone failures of screw air compressors is the overload of the main engine motor. I believe that many companies have similar experiences when using them, mainly due to the following 5 reasons: 1. Loose wiring

Why does my compressor trip on over temperature?

If your compressor trips on over temperature, it could be any of the following: Ambient temperature too high or not enough ventilation. A screw compressor can run loaded ('pumping air') or unloaded ('idle'). The inlet/loading valve opens and closes according to air demand.

What are the problems of screw air compressor?

Contact failure of screw air compressor The contactor of the screw air compressor is aging, the suction is not good, and the contact surface is small, which causes the current to increase. In this case, the electrical system is easily burned out. This reason is also the most likely to cause more extensive damage.

What are the main causes of motor overload?

1. Main reasons of motor overload are as follows: Three filters (air intake filters, oil filters, oil separator) severe blockage; minimum pressure valve seal failure, resulting in a load when the motor starts encounter; when starting, vent valve is not open, the intake valve is not closed. 2. Two main reasons lead to high temperature:
