

Celtic sea drilling rig

What is the Celtic Sea lease round?

Results for the Celtic Sea Lease Round, also referred to as Lease Round 5, have been published by the Crown Estate, awarding Equinor and the joint venture Gwynt Glas (EDF Renewables UK/ESB) a 1.5 GW each. The round offered a total of three PDAs to developers, each 1.5 GW.

When will the Celtic Sea project start?

The Celtic Sea projects are likely to be built out in phases, with initial smaller scale projects in the 250-500 MW range first, with additional expansions expanding at a later date. The ventures should, at the moment, be viewed as long-term opportunities, with first power potentially towards the mid 2030s.

Will Celtic Sea round 5 be a success?

The Celtic Sea Round 5 is the first time new lease areas have been awarded in the UK since the 2023 INTOG lease rounds, testing the developer's interest in new offshore wind projects in the country. Despite only two of three sites being awarded, the round should be seen as a success.

What will the Crown Estate do with Celtic Sea round 5?

The Crown Estate will review the options for the third and last site, seeking solutions to optimize the full potential of the 4.5 GW development area. The Celtic Sea Round 5 is the first time new lease areas have been awarded in the UK since the 2023 INTOG lease rounds, testing the developer's interest in new offshore wind projects in the country.
