What is an auger drill rig?

Auger drilling is an effective soil sampling system for geotechnical analysis. It allows drillers to collect samples that are undisturbed and representative of the subsurface environment. Key applications for auger drilling include: Where Can You Rent Auger Drill Rigs? You can rent auger drill rigs right here at Rig Source!

What is a continuous flight auger (CFA)?

CFA (continuous flight auger) is a single pass piling method, where a continuous flight auger is used to drill to depth. During the grouting phase, concrete is pumped through the auger simultaneously with the extraction of the auger from the ground. Usually, a computer is used to monitor the concrete flow and pressure to ensure the pile integrity.

What are the different types of augers used in drilling?

There are several types of augers involved in the drilling process, each designed for specific conditions: Hollow Stem Augers: Ideal for softer terrains, these augers allow for easy soil sampling and are commonly used in geotechnical investigations.

What is a solid flight auger used for?

Solid Flight Augers: Built for tougher rock and soil layers, solid flight augers are used in more challenging drilling environments where greater force is needed for harder surfaces. Auger drilling is an effective soil sampling system for geotechnical analysis.

How does a CFA rig work?

CFA piling rigs, also known as Continuous Flight Augers, are used as a means of piling. The stemmed auger is screwed into the ground until it has reached its desired depth, and concrete is then pumped down the hollow stem auger, filling it with concrete. This makes CFA rigs an incredibly efficient piling machine.
