

# Cost of an mpd system for ultra deepwater drilling rig

What is managed pressure drilling (MPD)?

Contain hydrocarbons or other wellbore fluids and prevent their release to the atmosphere. Managed pressure drilling (MPD) provides a closed-loop circulation system in which pore pressure, formation fracture pressure, and bottomhole pressure are balanced and managed at surface.

Why should you choose a deepwater MPD system?

Our comprehensive deepwater MPD offering delivers cost savings through improved reliability, operability, predictability, and serviceability. Our systems provide the high degree of flexibility needed to balance integration needs for a rig or rig fleet - so you can use existing rig crews and infrastructure or third-party equipment and services.

Can a rig accept MPD equipment?

Original equipment manufacturer (OEM) equipment is also available for rental or sale. Depending on your requirements, we can prepare rigs to accept the appropriate MPD equipment, install and commission the equipment, or both--for a specific well or to increase the capabilities of your rig.

What is Seadrill managed pressure drilling (MPD)?

h equipment and pipe runs pre-planned for efficiency. Partnering with top manufacturers, Seadrill delivers a fully i troducing Seadrill Managed Pressure Drilling (MPD) Seadrill MPD provides our customers with substantially improved efficiency, accuracy, and automation, all while reducing construction expenses and ensuri

Why do we offer multiple configurations for a deepwater drilling rig?

Deepwater drilling operations present many different needs and requirements—a one-size-fits-all approach is difficult to apply. That's why our MPD systems are offered in multiple configurations to allow integration with the rig in a way that makes the most sense for the client.

Are ultra deepwater drilling units safe?

MPD Play Video Since the advent of Ultra Deepwater Drilling units, with water depths in excess of 7,500ft, the risks and hazards of operating in such environments have provided new challenges to operate safely and efficiently. With advances in technology, the exploration of areas previously unknown and 'un-drillable' can now...
