What does a rotary screw compressor inlet valve do?

The air compressor inlet valve regulates the capacity of your rotary screw compressor. The air compressor unloader valve regulates the amount of air that is sucked in by your air compressor. By opening and closing the air intake, the capacity of a rotary screw compressor is regulated.

What is a gas intake valve?

Used for air, natural gas and other gas types. The intake valve is design to modulate, opening or closing to control the flow of air (or gas) into a system. The valve is operated pneumatically. Air is applied to a control port pressurizing a piston.

Can a rotary screw compressor intake be open or closed?

The intake can be design as normally open or normally closed. A normally open valve would have to be modulated closed for the system to be closed at start-up. A typical use is to control the airflow into a rotary screw compressor. The valve would be modulated open or closed by the compressor control system to meet downstream air demands.

How does a Sullivan-palatek air compressor work?

The engine speed is regulated by the Sullivan-Palatek Electronic Controller (SPEC). From full to approximately 60% capacity, the delivery is controlled by engine speed and a gradual closing of the inlet valve. When unloaded the inlet valve is closed to prevent atmospheric air from entering the compressor.

What is an air compressor unloader valve?

The air compressor unloader valve regulates the amount of air that is sucked in by your air compressor. By opening and closing the air intake, the capacity of a rotary screw compressor is regulated. This valve is also commonly called an inlet valve, intake valve, unloader and unload valve.

What are the different types of intake valves?

Our standard Intake Valves come in three body types: The customer sets the flange drilling to match the system. Used for air, natural gas and other gas types. The intake valve is design to modulate, opening or closing to control the flow of air (or gas) into a system. The valve is operated pneumatically.
