What are the drill pipe slips used for in oil rigs?

Slips (oil drilling) Slips is a device used to grip and hold the upper part of a drill string to the drill floor on an oil rig. The slips are constructed as a collection of metal wedges, hinged together to form a circular shape around the drill pipe. On the inside surface, the slips normally has replaceable steel teeth that grips the pipe.

What is life like on offshore oil rig?

Life is never boring on an oil rig. All offshore rigs have good recreational facilities to keep on-board staff entertained when not on shift, whether you're in drilling, the roustabout team or a derrickhand. From small movie theatres and pool tables, to air hockey, large screen TVs and video game consoles you won't be bored!

How deep can you offshore drill for oil?

These rigs drill smaller deposits in narrower areas, meaning this is a low-cost way to get a little oil, which attracts many companies. These rigs can drill anywhere from 200 to 1,200 meters (660 to 3,940 feet) below the surface.
