

## Drill rig by cavein

What is a caving in drilling?

What Does Cavings Mean? Cavings can be defined as those pieces of rock or formation material that fall into the borehole from the borehole wall. Cavings are not those pieces of rock displaced by the action of the drill bit rather those that fall off from the wall after the hole has been drilled.

How do you prevent a cave-in in a trench?

SHIELD IT. OSHA is focusing on reducing trenching and excavation hazards. Trench collapses, or cave-ins, pose the greatest risk to workers' lives. To prevent cave-ins: Employers should also ensure there is a safe way to enter and exit the trench. Keep materials away from the edge of the trench. Look for standing water or atmospheric hazards.

How do you know if a trench is a cave-in?

The Competent Person must frequently observe the trench floor, walls, and the area adjacent to the trench for early signs of conditions that can lead to a cave-in. Some of the more common conditions are:

What causes a cave-in in a trench?

As important as the surcharge from the weight of the equipment are the vibrations caused by the presence of the equipment. Vibration caused by any equipment such as the backhoe, loader, boom truck, or tamping equipment can cause the soil to loosen and result in a cave-in. The equipment could be in, or alongside the trench and have the same impact.
