

## Drill rig cable break

How does a cable drilling rig work?

It is a very old technique, slow but steady and only requires one person to operate the rig. A derrick is raised to support the cable tool. The cable tool is a drilling "bit" that is repeatedly raised and dropped in the hole to break up any formation encountered. Then the cable tool is swapped out and a bailer is lowered into the hole.

What is cable tool drilling?

Cable tool drilling, also known as percussion drilling, is a method that uses a heavy drill bit suspended by a cable. The drill bit is raised and then dropped into the borehole to break up rock and soil. The broken material is removed using a bailer or sand pump. This technique is commonly used in: How Does Cable Tool Drilling Work?

What is a Cabletec SL drill rig?

The Cabletec SL is a fully mechanized cable bolting drill rig for drilling and installation of cable bolts up to 6 m in length. It drills a hole diameter of 38 mm using fully mechanized extension drilling up to 6 m in depth. Download the technical specification for more information.

What is a cable drill?

This technique is used by some commercial drillers. It is a very old technique, slow but steady and only requires one person to operate the rig. A derrick is raised to support the cable tool. The cable tool is a drilling "bit" that is repeatedly raised and dropped in the hole to break up any formation encountered.

What equipment do you need for a percussion drilling rig?

Support equipment required for this drilling process are basic, a small truck with welding equipment, torches and a small amount of makeup water. A separately mounted deck engine powers the rig. The cable tool uses the percussion cutting action, utilizing a 1,200 pounds real string, and usually a carbide button bit.

How do you fix a broken logging tool?

If it is not possible to use either a side-door overshot or a cut-and-thread, then an alternative is to break the weakpoint, and then recover the cable and use the drill pipe to fish for the logging tool. If tool recovery is not an option, then a last resort is to push it to the very bottom of the hole, and then plug it using cement.
