How do oil and natural gas drilling rigs work?

Oil and natural gas drilling rigs are used to identify geologic reservoirs and create holes to extract oil or natural gas from those reservoirs. Onshore oil and gas fields typically have a larger rig that drills a well, which is then replaced with a smaller service rig that gets the well online.

How many rigs are there in the US?

Baker Hughes reports 554 active drilling rigs in the US. In April, the total active rig count was 587. One year ago, the total active rig count was 588. The oil rig count is currently 438 rigs, compared to 483 in April and 485 one year ago. The gas rig count is 111, compared to 99 in April and 98 last June.

What does active rig count mean?

When drilling rigs are active they consume products and services produced by the oil service industry. The active rig count acts as a leading indicator of demand for products used in drilling, completing, producing and processing hydrocarbons.

How many gas rigs are there in Texas?

The gas rig count is 111, compared to 99 in April and 98 last June. In the major plays, the Permian Basin rig count is at 271 rigs, 13 fewer than April's count. In East Texas, the Eagle Ford has 41 active rigs, 6 fewer than in April. The Haynesville rig count is 36 rigs, 4 more than April's count.
