Epiroc offers the most comprehensive line of rotary blast hole drilling rigs in the industry. With a multitude of configurations to choose from you can find the perfect solution for your needs. Discover our wide range of surface drilling equipment within mining, quarrying, construction, civil engineering and the dimension stone industry.

What are the different types of exploration drilling?

There are two main methods of exploration drilling - core drilling and reverse circulation drilling (usually referred to as RC). Core drilling yields a solid, cylinder shaped sample of the ground at an exact depth. Reverse circulation (RC) drilling yields a crushed sample, comprising cuttings from a fairly well determined depth in the hole.

What causes EGPA?

The cause of EGPA is unknown but is probably multi-factorial. Genetics may play a small role in the disease, but EGPA is almost never seen in two members of the same family. Environmental factors such as exposure to industrial solvents may play a role in susceptibility to this disease, but this is largely speculative.
