What is the first stage in the quarry design process?

Setting of the first stage in the quarry design process. This is illustrated in the flowchart at the base line values. Setting of excavation limits. Consideration of a range of alternative concepts (working method and sequence, restoration and after-use), estimation of resources for each and identification of key t

How far away should a fill be from a ditch or quarry?

and 3m from any ditch or quarry infrastructure. These distances may need to be increased where fill construction uses little or no compaction, where ground is sloping, where long term stability of the fill or foundation are uncertain, where the fill may degrade with time or where greater distances are imposed by a

What documents should be prepared to support the quarry design process?

Documents prepared to support the quarry design process. These documents should include the results of the geological desk study, all raw data, borehole and trial pit logs, location plans, testing schedules and test results and should form part of the site documentation. Information may then be extracted for inclusion
