

## Drilling rig accident brisbane

What happened to the overburden drill?

The mast of the drill was in a raised position at around 25 degrees off vertical. Two drill maintainers arrived at the overburden drill to inspect and repair a reported oil leak. In preparation for the repair the drill was washed, lowered off its three hydraulic levelling jacks, refuelled and the hydraulic tank refilled.

Why did the operator drill a hole in an overburden drill?

The operator completed drilling a hole as per design when machine sensors detected low hydraulic oil level. The mast of the drill was in a raised position at around 25 degrees off vertical. Two drill maintainers arrived at the overburden drill to inspect and repair a reported oil leak.

What happened to a 67-year-old rig operator?

The 67-year-old operator suffered a compound fracture to his leg while jumping clear of the rig as it fell. The company was barred from using the rig and excavator, which were both damaged in the accident. "Two prohibition notices were issued and subsequently complied with," a Workplace Health and Safety Queensland spokesperson said.

Is there a risk assessment for the use of the drill?

No operational risk assessment for the use of the drill was identified. There was no working visible manual level bubble fitted. The drill had been involved in a rollover five years prior. Following this incident grade alarms were fitted to the drill.

What happened at a Brisbane worksite?

A man is fighting for life and another is injured after they were struck by a metal object at a Brisbane worksite. Paramedics were called to the CavCorp development site on Wyandra Street in Newstead at 12.10pm (1.10pm AEDT) today after a metal object fell from a piece of machinery.

What happened at a deck handrail drill?

The operator and one maintainer exited the drill safely. The other maintainer was trapped between the deck handrail and the light vehicle parked beside the drill. An emergency was initiated, and the Emergency Response Team (ERT) assisted with the safe recovery of the trapped maintainer. How did it happen? Events leading up to the incident
