How do oil and gas companies pay for drilling rigs?

When oil and gas companies contract for drilling rigs, they primarily use short-term well-to-well contracts that are awarded through a bidding process among the owners of suitable nearby rigs (Corts, 2008). Most of the GoM rig contracts have remuneration in the form of day rates (Corts, 2000; Corts and Singh, 2004).

Does rig activity affect oil price?

Ringlund et al. (2008) estimate the relationships between rig activity and the oil price, and find different price elasticities in different regions. Kellogg (2011) estimates learning-by-doing effects of drilling activity in Texas, and demonstrates the importance of contracting relationship between oil companies and drilling companies.

Are Rig rates econometric?

To our knowledge, rig rates have not been analysed empirically before in the economic literature. By econometric analysis we examine the effects on Gulf of Mexico rig rates of gas and oil prices, rig capacity utilization, contract length and lead time, and rig specific characteristics.

How important is offshore drilling rigs for energy security?

It also helps reduce reliance on oil and gas imports thereby enhancing energy security. According to Research Nester projections, the offshore drilling rig market is expected to exceed \$160 billion by 2036 with a growth rate of 7% during the forecast period from 2024 to 2036.

Are Rig rates sensitive to gas and oil prices?

Not surprisingly, rig rates are highly sensitive to gas and oil prices and capacity utilization. We also examine the effect of contract length and lead time, build year, drilling depth capacity, and rig classification. Rig rate formation is interesting in terms of the bargaining situation between rig owners and oil companies.

Why do oil and gas companies use rigs?

Oil and gas companies use rigs to explore for oil and gas, and to develop oil and gas fields. They typically have a number of projects with different expected profitability, and the expected value of each project is increasing in the expected prices of gas (p_G) and/or oil (p_O).
