

## Drilling rig explosion 2010

When did the Deepwater Horizon oil spill start?

The Deepwater Horizon oil spill began on April 20, 2010, when an explosion damaged the Deepwater Horizon oil rig. The rig's sinking on April 22 began the discharge of oil into the Gulf of Mexico. Who owned the rig responsible for the Deepwater Horizon oil spill?

What was the impact of the oil rig explosion?

The explosion, which killed 11 men, caused the rig to sink and started a catastrophic oil leak from the well. Before it was capped three months later, approximately 134 million gallons of oil had spilled into the Gulf, the largest offshore oil spill in U.S. history. What were the impacts?

How did a drilling rig explode?

The expanding gas shoved fluid out of the well at massive speeds, and this gas ignited on contact with the rig pump motors' electrical circuitry. At around 9:50 pm, the first explosion happened as pieces of drilling machinery were broken into bits and gallons of mud and oil splashed overboard. How did this devastating accident happen?

Who owns Deepwater Horizon oil rig?

The oil rig involved in the Deepwater Horizon oil spill was owned and operated by offshore oil-drilling company Transocean and leased by the oil company BP. What caused the Deepwater Horizon oil spill?

How much oil was spilled during the Deepwater Horizon disaster?

As of 2010, the Deepwater Horizon disaster was the largest marine oil spill ever to occur in U.S. waters. By the time the well was capped on July 15, 2010, nearly five million barrels of oil (205.8 million gallons) had spilled into the Gulf of Mexico.
