

Drilling rig troll a

Explore the futuristic architecture of the Troll A platform, one of the largest and most iconic oil drilling rigs in the ocean. Discover the innovative design and engineering behind this ...

Inside one of the hollow legs of the Troll A Oil Platform, the tallest and heaviest structure moved by man. (472m)

Troll A is an offshore natural gas platform in the Troll gas field off the west coast of Norway. This colossal platform is one of the most complex ...

Troll-A extracts natural gas from reservoirs located up to 3,500 meters (11,500 feet) below the seabed. The gas is processed on the platform and then transported via pipelines to ...

Welcome back to the Fluctus Channel for a feature on the life of those working thousands of miles from the shoreline, on the offshore platforms in the middle of the ocean. Faced with great ...

Did you know that one of the largest and most remarkable engineering feats in the world lies beneath the waves of the North Sea? Meet Troll A, a colossal natural gas platform ...

One person has died and two more were injured after a breaking wave hit the COSL Innovator semisubmersible drilling rig around 5pm local time on 30 December, Statoil ...

A platform nearly 500 metres tall, the Troll A Platform is One of the Biggest Floating Structures in the World. It was given the credit of the biggest oil rig in the world the ...

The Troll A marine platform is not just any oil platform--it holds the record for being the largest concrete structure ever submerged in the ocean. Built to extract natural gas, ...

A well control incident on the Songa Endurance drilling rig during 15 October 2016 was the worst event of its kind on the Norwegian continental ...

It stands at an impressive height of 2,001 feet and features a multi-deck topside containing essential equipment, living quarters for workers, pipelines, an operations room, and a drilling ...

The Troll A platform represents the pinnacle of offshore engineering, showcasing the indomitable human spirit to conquer challenges ...

Located about 80 km off the west coast of Norway is "Troll A", a colossal natural gas platform and the tallest

Drilling rig troll a

structure ever moved by mankind.

Troll A was built by Norwegian Contractors for Norske Shell, with base construction beginning in July 1991 at a cost of 4150 million NOK, or approximately US\$650,000,000 at the time. The base...

Die Troll A ist die größte Gasförderplattform und gleichzeitig die größte Bohrinselform der Welt. Sie dient der Förderung von Erdgas aus dem Troll-Gasfeld in der norwegischen ausschließlichen ...

Equinor has secured consent from the Norwegian Ocean Industry Authority to deploy the Deepsea Bollsta semi-submersible rig--managed by Odfjell Drilling --for plug and ...

Off the west coast of Norway lies one of the largest and most complex engineering projects in human history. Not only that, the Troll A ...

The Troll A platform is a Condeep offshore natural gas platform in the Troll gas field off the west coast of Norway. It is the tallest structure that has ever been ...

Explore the futuristic architecture of the Troll A platform, one of the largest and most iconic oil drilling rigs in the ocean. Discover the innovative design and ...

RealLifeLore recently posted the above video outlining how people built and moved the offshore natural gas-drilling platform, Troll A. Troll A--for ...

Richard Hammond explores the Troll A gas platform, the most massive object ever moved by humans, in this episode of Engineering Connections. Discover its sur...

Explore how drilling rigs operate, their crucial components, and their pivotal role in oil and gas extraction. Learn about safety and efficiency.

The Troll field in the North Sea has set a historic production record, delivering 42.5 billion standard cubic metres of natural gas in 2024. This is the ...

Equinor, a Norwegian state-owned energy giant, has received the go-ahead from the country's authorities to undertake plug and abandonment (P& A) activities in the North Sea ...

Equinor has made a discovery 17 kilometres west of the Troll field in the North Sea. The discovery is currently estimated at between two and 12 million barrels of oil ...

On Friday 27 August at 21.25, production started from the Troll Phase 3 project in the North Sea. The project has a break-even price below 10 dollars and CO2 ...

Drilling rig troll a

You can imagine that you can travel to the Troll A platform in the North Sea without working in the oil and gas industry. It cost you quite a lot of money This is the news below. ...

Equinor has received the go-ahead to undertake plug and abandonment (P& A) activities in the North Sea with a rig managed by Odfjell Drilling.
