

## Eds drill rig

What is an eds on a moored vessel?

An EDS is optional for moored vessels. The EDS is a programmed sequence of events that operates the functions to leave the stack and controls in a desired state and disconnect the lower marine riser package (LMRP) from the lower stack. The number of sequences, timing, and functions of the EDS are specific to the rig, equipment, and location.

What is an EDS in a BOP stack?

An EDS shall be available on all subsea BOP stacks that are run from a dynamically positioned vessel. An EDS is optional for moored vessels. The EDS is a programmed sequence of events that operates the functions to leave the stack and controls in a desired state and disconnect the lower marine riser package (LMRP) from the lower stack.

How many locations should eds be activated?

There shall be a minimum of two separate locations from which the EDS can be activated e.g. located in the primary and remote control stations. Frequency of testing and acceptance criteria shall be in accordance with Table 6 and Table 7. EDS tested prior to deployment - requirement to complete sequence in under 90 seconds.

Emergency Disconnect Sequence (EDS) Upon human activation, provides automatic closure of the wellbore and automatic disconnect of lower riser package when specific emergency ...
