

What was the first rig to drill a hole?

Drake was the first to use large diameter pipe to case the hole. Soon, cable-tool rigs were everywhere, pounding into the earth, searching for oil. In 1860 steam engines were introduced to power rigs and the drilling operation became much more efficient.

What rig is used in the video?

The rig used in the video is one of the most advanced land rigs in the industry with top drive, Iron Roughneck™, and automated catwalk. The drilling portion of the video is followed by well completion. The video shows both the surface and animated-downhole process for multi-stage hydraulic fracturing.

What is rigging up a rig?

Rigging up the well consists of taking the rig modules from the trucks and assembling the rig. Included in the rigging up process is setting-up all of the rig systems and testing these systems. Here is a YouTube video, "Rigging up Land Drilling Rig" (3:35), showing the Rigging Up process of the derrick:

What equipment is used for a rig?

**RIG EQUIPMENT ORIENTATION 4.1 Basic Rig Equipment** The diagram shown is of a land rig but the principles are the same for an offshore rig. The following lessons will describe in detail what each piece of equipment is used for. 1. Crown Block 2. Catline Boom and Hoist Line 3. Drilling Line 4. Monkeyboard 5. Traveling Block 6. Top Drive 7.

What is a rig system?

**RIG SYSTEMS 6.1 Hoisting System** Used for raising and lowering the drilling assembly, and for running casing, completion equipment and other tools in and out of the hole.

How do I specify casings for a drilling program?

The casings to be run are defined by the well design. For the drilling program, the configuration of each string should be stated per the drilling program checklist given at the start of this section (2.1.1.). It is not necessary or helpful to include all the casing design calculations in the drilling program.
