

French Red Five Ring Screw Air Compressor Parts

Where is a compressor ring located?

Compression rings are located at the top of the piston and are responsible for sealing the combustion chamber. Oil rings are located at the bottom of the piston and are responsible for keeping oil from leaking into the cylinder. Piston Rods - The piston rod is the part of the air compressor that moves back and forth in order to compress air.

What is a packing ring on a compressor?

Packing Rings - A packing ring is a seal that is used to prevent air from leaking out of the compressor. The packing ring is located between the piston and the cylinder head. When the piston goes up, it pushes air into the cylinder head and when the piston goes down, it pulls air out of the cylinder head.

What is a rotary screw compressor?

Rotary Screw Compressor - A Rotary Screw Compressor is a compressor which uses two interlocking rotors to compress air. This type of compressor can run for a long time at low temperatures without breaking down. The rotors in a rotary screw compressor are meshed together, and as they turn, they draw air into the chamber between them.

What is a bull ring on a compressor?

Bull Rings - A bull ring is a circular metal ring that covers the end of the piston rod. This ring helps to keep oil and air from leaking out of the compressor, and also serves as a support for the piston. The bull ring is connected to the piston by a series of small metal rods, and is usually made out of cast iron or steel.

What types of air compressor parts are compatible with Worthington?

Our Reciprocating air compressor parts are compatible with most popular compressor manufacturers, including Worthington. We supply standard compressor parts such as filters, separators, valves, and bearings, which are all made to the same quality standards as our reciprocating products.
