

Geotechnical drilling rig offshore

Midwater offshore geotechnical drilling rig for depths down to 600m, with 4m of heave compensation. Compatible with wireline downhole sample & testing tools.

Home / Ancillary Equipment / Offshore Geotechnical Equipment Offshore Geotechnical Equipment Dando power swivels hold a longstanding reputation ...

Offshore Geotechnical Drilling Offshore Geotechnical Drilling We supply a complete geotechnical solution and services utilizing offshore heave compensated drilling, seabed sampling and in ...

Geotechnical testing is a critical component of offshore geotechnical engineering, providing essential data for the design and foundation construction of offshore ...

Geotechnical Drilling Rig GMR300 Series Introduction Sampling and Downhole Testing Geoquip has designed and built a fully heave compensated, offshore geotechnical drilling system based ...

Discover how offshore geotechnical drilling supports wind farms, oil rigs, and subsea pipelines. OTS Offshore provides advanced CPT, SPT & ...

From wind turbines receiving cargo by drone to unmanned drilling rigs producing oil, offshore operations are being automated. For geotechnical exploration vessels, retrofitting ...

Offshore geotechnical drilling rig for depths down to 300m, with 4m of heave compensation. Designed also for mobility on to a vessel of opportunity.

The Geoquip Saentis together with the GMR600 offshore geotechnical drilling rig operates at water & borehole depths down to 1000m.

We supply a complete geotechnical solution utilising offshore heave compensated drilling, seabed sampling and in situ testing services. Gardline owns and ...

Our vessels are fitted with heave-compensated geotechnical drilling rigs, a suite of state-of-the-art tools for soil sampling and in-situ testing, and an offshore ...

All offshore geotechnical investigations are conducted from our heave compensated drilling rigs with a wire line system including downhole Wison ...

An offshore geotechnical site investigation is a geological survey that employs testing methods from a drilling

Geotechnical drilling rig offshore

ship or vessel outfitted with geotechnical ...

Simplify geotechnical investigations using rigs engineered for efficiency with their centerline head side shift, comfortable truck options, and off-road capabilities ...

? Attention - Why Geotechnical Drilling Matters In the ever-demanding world of offshore energy and marine infrastructure, geotechnical ...

Geoquip Marine designed and built offshore geotechnical drilling rig. Operates a drill string of 3500m length for ultra-deep-water site investigations.

Europe's Largest Sonic Drilling Contractor GeoSonic's rigs and crews have a proven track record of advancing boreholes through a vast array of ground conditions encountered throughout the ...

Primary types of sampling and in-situ testing ... Geotechnical drilling vessel Geotechnical jack-up drilling rig Vibrocorer for shallow sampling

Sun Machinery is the place for contractors to buy and sell rigs and vessels and related equipment. Our database contains thousands of used equipment for sale, which are presented and ...

Offshore geotechnical engineering is a sub-field of geotechnical engineering. It is concerned with foundation design, construction, maintenance and decommissioning for human-made ...

Offshore Geotechnical Drilling Taka Hydrocore owns and operates geotechnical drilling rigs which complete with heave compensated systems which can be set up onto ...

Geotechnical drilling rig offshore
