Which geothermal drill rig is right for You?

Whether you require the powerful SIMCO 7000 for high efficiency and fast geothermal drilling of boreholes or geothermal wells, or the SIMCO 2800 for more compact engineering and easy maintenance, you'll find either geothermal drill rig to perform at the top of its class and easily accomplish your drilling requirements.

What is a geothermal rig used for?

Some of the most notable applications include: Geothermal drilling rigs can be used to access geothermal resources for direct use applications, such as space heating, greenhouse heating, and industrial processes. By drilling wells to access hot water or steam, geothermal energy can be used to meet a variety of thermal energy needs.

What is a track-mounted geothermal drilling rig?

The track-mounted geothermal drilling rig easily maneuvers on site and preserves the option for continuous sampling to characterize the subsurface, improving geothermal well design and construction. Minimize your geothermal development time and site clean-up costs by casing holes quickly without drilling mud using sonic.
