What is an industrial slurry pump?

EDDY Pump's industrial slurry pumps are engineered to handle the most challenging pumping applications, providing high efficiency and reliability in various industries. Designed for heavy-duty performance, these pumps can efficiently move abrasive slurries, solids, and viscous materials with minimal clogging and wear.

What is the best pump for handling slurry?

The best pump for handling slurry is typically a standard centrifugal pump with robust construction and wear-resistant components. These pumps are designed for pumping slurries and managing the slurry's abrasive nature and high solids content. Traditional centrifugal pumps are ideal for transporting fine particles.

What is a heavy duty slurry pump?

Heavy-duty slurry pumps are critical for efficiently pumping slurries and large solids in demanding mining, dredging, construction, and wastewater treatment applications. Submersible pumps can also be the right pump for the job, because their heavy duty construction makes them perfectly suited for slurry applications.

What are Eddy pump industrial slurry pumps?

EDDY Pump industrial slurry pumps are non-clog pumps designed for high solids industrial pumping applications. Our patented pump technology outperforms all centrifugal, vortex and positive displacement pumps in a variety of the most difficult pumping applications.

What is a centrifugal pump used for?

Traditional centrifugal pumps are ideal for transporting fine particles. Specialized centrifugal pumps, such as submersible and heavy-duty horizontal slurry pumps, are erosive-wear and are ideal for slurry pumping for mining, dredging, and wastewater treatment industries.

Are submersible pumps right for You?

Submersible pumps can also be the right pump for the job, because their heavy duty construction makes them perfectly suited for slurry applications. These pumps withstand challenging conditions, maintain productivity, prevent equipment damage, and offer ease of maintenance.
