How does a land oil rig work?

Once the equipment is at the site, the crew sets the rig up. Here are the major systems of a land oil rig: Mechanical system - driven by electric motors Rotating equipment - used for rotary drilling Casing - large-diameter concrete pipe that lines the drill hole, prevents the hole from collapsing, and allows drilling mud to circulate

How does a drill rig work?

**Drilling the Hole:** Once the rig is set up, the drill bit is lowered into the earth. The bit spins rapidly, cutting through soil, rock, and other materials as it goes deeper. **Using Drilling Mud:** To keep the drilling bit cool and clear of debris, a special fluid called drilling mud is pumped down into the hole.

What are oil rigs on land?
