How much does an air compressor cost per year?

The air compressor that they have is a 100 hp rotary screw. The electrical rate for this facility is at \$0.08/KWh. With these factors, the annual cost can be calculated by Equation 1:  $100\text{hp} * 0.746 \text{ KW/hp} * 1,000\text{hr} * \$0.08/\text{KWh} / 0.95 = \$6,282$  per year.

How much does compressed air cost per year?

With these factors, the annual cost can be calculated by Equation 1:  $100\text{hp} * 0.746 \text{ KW/hp} * 1,000\text{hr} * \$0.08/\text{KWh} / 0.95 = \$6,282$  per year. In both equations, you can substitute your information to see what you actually pay to make compressed air each year at your facility.

How many hours a year does an air compressor run?

To calculate the hours of running time, we have 250 days at 8 hours/day with a 50% duty cycle, or  $250 * 8 * 0.50 = 1,000$  hours of running per year. The air compressor that they have is a 100 hp rotary screw. The electrical rate for this facility is at \$0.08/KWh. With these factors, the annual cost can be calculated by Equation 1:

How much air does a 10 hp air compressor produce?

For a single-acting piston type air compressor, the amount of air is between 3.1 to 3.3 CFM/hp. So, if you have a 10 hp single-acting piston, you can produce between 31 to 33 CFM of compressed air. For a 10 hp double-acting piston type, it can produce roughly 4.7 to 5.0 CFM/hp.
