

How much does a dental electric air compressor cost

How much does a dental air compressor cost?

The cost of a dental air compressor varies based on factors such as size, features, and brand. Entry-level models suitable for small practices or single-chair setups typically range from \$800 to \$1,400. These units often have lower horsepower and may lack advanced features.

How does a dental compressor work?

At the heart of the compressor is the motor, which drives the compression process. The tank serves as a reservoir, storing the compressed air until it's needed. Air lines, including hoses and pipes, transport the compressed air from the tank to the dental equipment.

Are dental air compressors a good choice?

Dental air compressors are the best option if you are looking for enhanced reliability in your dental practice. The mechanism of air compressors integrated with high-level technology provides reliable and clean air, and protection to your practice. At Foshan Anya Medical Equipment Co., Ltd., we offer premium-grade air compressors with:

What is an oil-free dental air compressor?

Oil-free compressors eliminate the risk of oil vapor entering the air stream, which could compromise patient safety and damage sensitive dental equipment. The Anya Dental Air Compressor, for example, is ISO 8573-1 Class 0 certified, indicating it delivers oil-free air suitable for medical applications.

Why do dental clinics use oil-free compressors?

Oil-Free Compressors are a top choice for many dental clinics, as they guarantee 100% oil-free air. This ensures a clean and hygienic environment, vital in preventing contamination during dental procedures. The absence of oil in the air helps maintain an aseptic atmosphere, crucial for patient safety.

What are the components and features of a dental air compressor?

The components and features of dental air compressors vary by model but generally include the following: Air Receiver/Tank: Common sizes include 24L or 40L tanks, depending on the air demand of the practice. Motor Power: Common motor power ranges include 1.5 HP, ensuring enough power to supply the required air pressure.
