Is cable tool drill rigs still a thing?

There we found several large, truck-mounted cable tool drill rigs -- some only a few years old -- that had been purchased as part of a (yet another) failed water development scheme. The rigs were being dismantled and turned into machetes, plows, and other useful items.

What is a cable tool drill?

Cable tool drillers have developed the ability to interpret the feel of the drill string to improve well log accuracy and in identifying aquifers. The cable tool drilling process typically consists of drilling, removing the cuttings, identifying the geology, monitoring the waterflow, if present, and then advancing the casing.

How does a cable drilling rig work?

It is a very old technique, slow but steady and only requires one person to operate the rig. A derrick is raised to support the cable tool. The cable tool is a drilling "bit" that is repeatedly raised and dropped in the hole to break up any formation encountered. Then the cable tool is swapped out and a bailer is lowered into the hole.

How does a water drill rig work?

Water drill rigs use a combination of high volume varied pressure air, water and drilling mud to expel cuttings, unless want to withdraw the drill at regular intervals not much else will function and will wedge drill head in bore hole in short order. Cable tool rigs do not use a medium to flush the well. They bail out the cuttings as required.

What equipment do you need for a percussion drilling rig?

Support equipment required for this drilling process are basic, a small truck with welding equipment, torches and a small amount of makeup water. A separately mounted deck engine powers the rig. The cable tool uses the percussion cutting action, utilizing a 1,200 pounds real string, and usually a carbide button bit.

Can a drilling rig be used for oil & gas exploration?

Maybe even use the drilling rig for oil and gas exploration too. This rig uses 2 gas engines and is trailer mounted for portability. This simple design uses a small vertical shaft lawnmower engine and through a belt drive reduction turns a bit to drill through soil to a depth of 150 feet or more.
