

How to disassemble the Zhanbao screw air compressor

How do you remove a rotor casing from a compressor?

Loosen the hex bolts connecting inlet casing (B01) and rotor casing (B02) Apply jack bolts to the inlet casing to separate it from the rotor casing. Slide the inlet casing horizontally away from the compressor. Set the inlet casing on the work bench external surface up. Remove the retaining rings (L12) from both the male and female sides.

How should a compressor be operated?

Operate compressor in a well-ventilated area free from flammable liquids and vapors. Operate compressor in a ventilated area so that compressor may be properly cooled and the surrounding air temperature will not be more than 100°F (38°C). Never use a compressor in a wet environment. Protect material lines and air lines from damage or puncture.

How do you Jack a compressor rotor?

Discharge Balance Piston and Bearings Use eye bolts to place the balance piston onto the male rotor shaft at the discharge end of the compressor Remove the eye bolts and fix a threaded rod into the end of the male rotor. Slide the male jacking tool up against the balance piston.

How does a screw compressor work?

A screw compressor can run loaded ('pumping air') or unloaded ('idle'). The inlet/loading valve opens and closes according to air demand. The inlet valve is controlled by a solenoid valve that supplies control air to the inlet/loading valve. Check solenoid valve coil and solenoid valve operation.

How do you tighten a compressor belt?

Tighten any necessary part. (Make sure the main power is off.) Check the belts for tension. Belts should not move up and down when the compressor runs and when stopped, should not have more than 1/2 inch (13 mm) of play when depressed. Be careful not to over tighten belts during adjustment.

How does a screw compressor differ from a rotary lobe blower?

ROTOR In its construction the screw compressor closely resembles the well-known rotary lobe blower. It differs, however, in its peculiar rotor profile and its very large helix angle (the wrap angle of a mail rotor is 300 degrees in most cases). The rotor profile is the unsymmetrical type as shown in Fig-1.2 having both convex and concave faces.
