

How to disassemble the screw air compressor wheel

How do you change air compressor wheels on a lawn mower?

These air compressors use ordinary lawn mower wheels you can get at your local hardware. They use the same nut and bolt used to mount a lawn mower wheel to a lawn mower, these you can get at your local hardware also. You will need a 13/16 wrench or socket and a 9/16 wrench to change the wheels.

How do you fix a leaking air compressor?

Test the compressor again making sure you got all the leaks by replacing the vent valve and run the compressor until the automatic shutoff turns the motor off. Check for leaks by listening and feeling for leaking air with your hand. Remove the vent valve and clean the area to be painted with the wire brush.

What wrench do I need to change the wheels?

You will need a 13/16 wrench or socket and a 9/16 wrench to change the wheels. There is not enough room in the wheel frame to use a 9/16 socket. Unfortunately for me changing the wheels would not level the tank, so I had to add feet to the front frame. This compressor is missing the two rubber feet in the front frame.

Why is my Campbell Hausfeld air compressor rusting?

After I got this Campbell Hausfeld air compressor home; I plugged the compressor in to see if it worked. I found 3 things wrong with it, the vent valve is seized, and the unlevelled tank allows condensed water to pool at one end of the tank and not drain out even if you could open the valve. This caused the tank to rust and rupture.
