How do you drill a hole in a rock?

You can use a lubricant like water for the rock and the bit, but it's not necessary as rock is unlikely to split due to heat damage. When you have your initial hole, you can begin to drill through the rest of the material.

How do you drill a rock with a drill bit?

Make sure you have a stable work surface to prevent slippage while drilling. Place the rock securely on the surface, using clamps or a vise to hold it in place. This stability is crucial for accurate drilling. Select the appropriate drill bit based on the type of rock you are drilling.

Diamond-tipped drill bits or masonry bits (appropriate for the size hole you need) 3. Water source (spray bottle or helper with water hose) 4. Safety goggles and gloves 5. Dust mask 6.

How do you drill a river rock?
