

# How to install the gears of a down-the-hole drill

Do you drill a hole through a gear hub?

Drilling a hole through both the gear hub and the shaft is a great way to get a lot of torque. It also prevents the shaft from being overloaded because the pin will shear (break) if the torque is too much. There are three main types of pins to use in this application listed below from weakest to strongest.

How does a down-the-hole drill work?

Down-the-hole drills consist of various components such as hammers, bits, and pipes that work together to create boreholes. The hammer delivers rapid blows to the bit, while air pressure removes debris from the hole. These tools are designed to withstand high-impact forces and provide exceptional performance in challenging environments.

How do you attach a gear to a shaft?

The main methods of attaching gears to shafts are adhesives, press-fitting, cross drilled holes, compression, set screws, keyways, involute splines and taper lock bushings. Most industrial applications will use keyways and / or set screws. While adhesives and press fitting are usually done on low torque or hobby applications.

What is down-the-hole (DTH) drilling?

Down-the-hole (DTH) drilling has made it easier for contractors to drill wells faster and more efficiently, and to transition from dirt boring to rock boring just by adding a compressor and hammer to the drill bit.

What are down-the-hole drilling tools?

Down-the-hole drilling tools are essential for various industries such as mining, construction, and oil and gas exploration. These tools are versatile and can be used for a wide range of applications, from creating blast holes in quarries to installing water wells.

How do you attach a gear to a Lego motor?

Unlike the Lego gears and shafts shown below most motors have perfectly round shafts. This makes attaching gears, pulleys and sprockets difficult. The main methods of attaching gears to shafts are adhesives, press-fitting, cross drilled holes, compression, set screws, keyways, involute splines and taper lock bushings.
