How do you use a rock drill?

Run the rotation unit/rock drill to its lowest position. Use the boom and feed controls alternately to bring the feed down into the transport position and firmly down on its jack (A). Lower the hydraulic jack (extra equipment). Track oscillation cylinders to LOCKED position (Button 25).

How do you replace a rock drill cradle?

Remove the cradle for the rock drill, intermediate drill-steel support and the hose drum from the beam. Remove the old slide rails A by prising the lower edges of the bars outwards using a screwdriver. Clean the beam surfaces thoroughly. Fit the new slide rails. The larger edge on the slide rail must be facing upwards.

How do you clean a drill rig?

Keep the drill rig clean. Hose it down at regular intervals, preferably with an added grease solvent. Before opening any connection, clean the area round it thoroughly. Use clean tools and work with clean hands. Always plug hydraulic connections immediately after they have been detached. Use clean protective plugs.

How do you know if a down-the-Hole Rock Drill needs replacement?

Most inner tubes for down-the-hole rock drills have a wear indicator that shows when it is time for replacement. It can be seen and/or felt inside the bottom of the down-the-hole rock drill when the drill bit is removed. Often, this is obvious when it becomes more difficult to obtain the sample through the drill bit.

How do you clean a rig before dismantling?

Before dismantling, hose the entire rig clean with water and/or detergent containing a grease solvent. Observe the strictest cleanliness when dismantling hydraulic, compressed air and water flushing hoses. Immediately plug all hoses, nipples and hydraulic oil pipes, or seal and protect them from dirt in some other suitable way.

How often should you lubricate a down-the-Hole Rock Drill?

For maintenance of the down-the-hole rock drill, see the supplier's documentation. The lubrication points are on the arm, the rotary actuator, the outlet swivel and the air swivel. For the rotary actuator, lubrication is recommended every two months or every 500 engine hours. Other points must be lubricated daily.
