

How to use a screw air compressor

How does a rotary screw compressor work?

The screws produce a hydraulic seal to compress the air. An oil-flooded system, which is the more common type of rotary screw compressor, uses this process to complete the compression cycle: Air enters the machine: Air around the system enters it through the inlet valve.

Why is a rotary screw air compressor a good choice?

They conserve more energy by producing less heat and having an efficient design. Rotary screw compressors also use less oil than other compressors. You then save money on power and oil costs with this machinery. Provides more power: A rotary screw air compressor is efficient, but it also puts out more power for your operations.

What is a screw compressor used for?

In the oil & gas industry, screw compressors are used to power drilling equipment and pneumatic systems for transporting drilled oil. Compressed air may also be used to power equipment for compressing natural gas and refining petroleum. Other uses in the energy sector include: Gas re-injection for enhanced oil recovery.

How much noise does a rotary screw air compressor make?

A typical rotary screw air compressor will operate at 65-75 dBA, or somewhere between the noise level of a car engine and a vacuum cleaner. A rotary screw air compressor will also generate less vibration. Cooler Temperatures: Typical internal operating temperatures for a rotary screw air compressor are 140-160°F.

What are the different types of rotary screw air compressors?

There are two basic kinds of rotary screw air compressors: oil-injected and oil-free. Oil-injected screw compressors are the most common type of industrial air compressor and work well for most applications. Within these categories, there are also some subtypes to consider.

What is the difference between a rotary screw and a reciprocating air compressor?

A rotary screw air compressor delivers 4-5 CFM per HP, while a reciprocating air compressor delivers 3-4 CFM per HP. In other words, if you compare a 20HP reciprocating compressor to a 20HP rotary screw air compressor, the rotary screw will produce 20-25% more air. That means they use less energy to produce the same volume of compressed air.
