

How to use the frequency meter for rock drill

How do I find the optimum ROP for diamond drilling?

The ROP is the key parameter in diamond drilling. Finding the optimum ROP for a given type of rock, ground condition, core bit and type of diamond drill rig will improve drilling performance. To find the optimum ROP, you should start by using the ROP suggested on the bit label.

How can I improve my drilling performance?

You can always make adjustments as you go in order to get your best drilling performance. In the drilling industry, the rate of penetration (ROP) is the speed at which a drill bit advances through the rock under it to deepen the borehole.

What are drilling parameters?

Drilling parameters play a large role in helping drillers achieve superior drilling performance and long equipment life. They are basic recommendations that help guide a driller avoid burning core bits or damaging other drilling equipment, and help achieve a good rate of penetration and core recovery.

What is the RPM of a hammer & a drill bit?

If a hammer has the frequency of 2220 BPM (at DTH hammer running pressure) and a drill bit with 115 mm OD with a gauge button of 14.5 mm it would give you a RPM at 89*. Bit cir. = Strokes/rev. = *Please be aware that the rock formations vary from soft to very hard and therefore the RPM can vary +/- 10%

How do I find the right rpm for core drilling?

To help find the right RPM for core drilling, depending on what size and kind of core bit is used to drill 101T2 with a impregnated diamond bit. Find the drilling speed of the impregnated diamond (in this case No5 under guidelines, 150 m/min to 270 m/min). Put the lower number in V1 and the higher number in V2.

How much weight should be placed on a drill bit?

The amount of weight that is placed on the bit depends on several variables, including the type of rock, ground conditions, type of core bit type used, the water flow, the depth of the bore hole, length of the rod string, the RPM, and the ROP. The recommended WOB is the maximum that should be used.
