What is a hydraulic drilling rig?

Hardrock Hydraulic Drilling Rig is fully hydraulic control drilling machine. It can be used as Well Drilling Rig and Blast Hole Drills. There is independent control panel for operator with great visibility during borehole drilling. The part of top drive which consist hydraulic motor and gearbox is designed and patented by Hardrock Drills.

How does a core drilling rig work?

Depending on the size of the hole, most situations require the drilling rig to be attached to the ground or surface with an anchor, bolt, or vacuum seal to keep the rig stabilized. Because core drilling requires substantial speed and force to get through concrete, a lot of heat is generated during the drilling process.

What types of drilling rigs are available?

The drilling videos featured here on our website showcase the capabilities of various types of drilling rigs, including water well drilling, auger drilling, core drilling, and more.

How does a conventional drilling rig work?

The drill stem lifted up to the ground from the well deposits much potential energy, and when the drill stem is lowered down to the well, the deposited potential energy is released. The conventional drilling rig just wastes this energy by braking and this energy cannot be recovered.
