

Hydraulic down-the-hole drill power head principle

Are hydraulic drills better than pneumatic drills?

Compared to pneumatic drills, hydraulic drills are capable of higher percussion power and faster penetration rates. Top hammer drilling principle Top hammer drilling energy and efficiency How rock breaks Rock drill (Top hammer) and Air hammer (DTH) configuration Percussion pressure or power Feeding To ensure maximum impact energy transfer.

What is down-the-hole (DTH) drilling?

Down-the-hole (DTH) drilling has made it easier for contractors to drill wells faster and more efficiently, and to transition from dirt boring to rock boring just by adding a compressor and hammer to the drill bit.

How does DTH drilling work?

With DTH drilling, contractors can change the drill that they were using for the current directional bore to a rock drill when they encounter rock by connecting the drill with a compressor and a steerable hammer. Well drilling also needed changes to be made to rotary drilling when the well needed to take a turn.

How does a down-the-hole drill work?

Down-the-hole drills consist of various components such as hammers, bits, and pipes that work together to create boreholes. The hammer delivers rapid blows to the bit, while air pressure removes debris from the hole. These tools are designed to withstand high-impact forces and provide exceptional performance in challenging environments.

How does a drill hammer work?

As the drill string rotates, the drilling hammer strikes down on the rock. The drill bit receives its striking power from a piston inside the hammer that is powered by compressed air. This action along with the rotational movement of the drill string crushes the rock efficiently.

What is the difference between rotary drilling and DTH drilling?

The lower rotational speed reduces vibrations to the drill head and rig. In relation to pure rotary drilling, DTH drilling is faster, due to the more focused and intensified stresses imposed on the rock, and does not require sophisticated drilling mud preparation, handling and cleaning systems.
