

## Idle drilling rig capacity

What is the capacity of a drill rig?

The capacity of a drill rig is expressed in terms of the maximum torque that can be applied to the drilling tool, as well as the downward force, or "crowd", that the rig can apply to the drilling tool. Torque and crowd are transmitted from the rig to the drilling tool by the drill casing. Drill rigs can be mounted on trucks, cranes, or crawlers.

How much fuel does a big rig use when idling?

Most engines in class 8 trucks in the US use around a gallon of fuel an hour when idling and around 0.64 gallons of diesel fuel per hour when idling with no load. How much fuel does a big rig use while idling? If idling at 650rpm-around .7gal per hour. If idling at 1,000rpm, about 1.1gal per hour.

Will offshore rigs be able to work in 2025?

While offshore rigs await production equipment delivery, they need to work or face warm stacking costs. The market has demonstrated price discipline thus far, although we may see an example or two testing it in 2025. Various regions across the world have exploration programs for 2025 that can serve as bridges to longer-term work.

Does deepwater FID support long-term rig demand?

There are at least 15 regions of the world with deepwater FID potential to support long-term rig demand. All have widely varying degrees of potential, risks and timelines. The Orange Basin in Namibia screens as potentially most impactful on rig demand after various discoveries in 2022-2024.

What is a 7g+ drillship?

The 7G+ Drillships are mostly in the US Gulf of Mexico (US GoM). These are generally the highest specification drillships and account for the >\$500k dayrate awards announced in 2024. For simplicity, the 7G+ group also includes Titan and Atlas (8G).

Why is the drillship market waiting for multi-year term drilling opportunities?

The drillship market is waiting for development drilling opportunities with multi-year term. Stranded newbuild 7G drillships require meaningful activation costs (~\$100mm) and will only be activated for multi-year term work. Those take longer to materialize. Delays on FPSO deliveries have contributed to slower contracting.
