

# Inland barge drilling rig

How do inland barge rigs work?

When moved from one location to another, the barge floats. When stationed on the drill site, the barge can be anchored in the floating mode or submerged to rest on the bottom. Typically, inland barge rigs are used to drill wells in marshes, shallow inland bays, and areas where the water is not too deep. Also called swamp barge.

What is a land barge rig?

Inland barge rig: A drilling structure consisting of a barge upon which the drilling equipment is constructed. When moved from one location to another, the barge floats. When stationed on the drill site, the barge can be anchored in the floating mode or submerged to rest on the bottom.

What is a drill barge?

A drill barge is simple a barge equipped for oil and gas drilling, but compared to a drillship it does not have its own propulsion system and must hence be towed to the drilling site by other vessels. The drill barge is used in inland, shallow or smooth offshore areas where the water depth is typically less than 150 meters.

Where does coastal drilling company operate inland barge rigs?

Coastal Drilling Company operates inland barge rigs in the South Louisiana and Gulf Coast markets. Coastal Drilling Company provides inland barge rigs in the shallow waters of the Gulf Coast. Coastal Drilling Company was founded in 2001 to offer superior drilling rigs and services. We maintain a stringent Health, Safety and Environmental program.

What is a floating barge rig?

When stationed on the drill site, the barge can be anchored in the floating mode or submerged to rest on the bottom. Typically, inland barge rigs are used to drill wells in marshes, shallow inland bays, and areas where the water is not too deep. Also called swamp barge. See floating offshore drilling rig.

What are the components of an inland barge rig?

The Key Components of an Inland Barge Rig: Barge: The foundational element of the rig, the barge serves as a stable platform for the drilling equipment. It's designed for stability in shallow waters and can be fitted with ballast tanks to adjust its draft and stability further.
