

Is a 15kw screw air compressor okay

Why should you buy a 15 kW screw compressor?

With its V-belt design this 15 kW screw compressor is 2-3% more efficient compared to other belt system, a saving that will add up over the life of the compressor. It features integrated quality air solutions, like the integrated dryer that help prevent condensation and corrosion in the air network.

Are screw compressors better than reciprocating units?

Screw compressors are much quieter than reciprocating units and have very good cooling systems, similar to automotive radiators across which passes cooling air generated by a fan. These units are designed to run at full load and will produce much cooler and cleaner air, which can be sent directly to an air dryer to remove water vapor.

What is a screw compressor?

Screw compressors, on the other hand, are more complex and expensive units and can often be mounted on the same sized storage tank. These units most often run in a different mode, load/unload which means they run continuously; alternately producing air at full load or running unloaded with zero compressed air output.

How much power does a screw compressor use?

To compare the two types of compressors, the math works like this: For a 10 cfm load, a 100 cfm 25 hp (21.3 kW at full load) screw compressor consumes 21.3 kW for 10% of the time (2.1 kW) and 7.4 kW for 90% of the time (6.7 kW). This means the total average power consumption is 8.8 kW to produce 10 cfm, a specific power of 88 kW per 100 cfm.

How much does a rotary screw air compressor weigh?

Sollant, 20-Years Factory Sollant 15kw best rotary screw air compressor's pressure is adjustable, We can set the pressure according to your requirements (7-12bar), It's motor safety grade reached IP23/55 and. It weighs only 335 kg with 1050mm length * 700mm width * 1150mm height.

Does a compressor use more power than a screw compressor?

If one looks up the efficiency of these units, you may find that at full load they consume more power per unit output than a screw compressor (usually rated in kilowatts per 100 cfm, called specific power).
