What type of rig is a jackknife rig?

Rigs are generally categorized as onshore (land) or offshore (marine). Onshore rigs are all similar, and many modern rigs are of the cantilevered mast, or "Jackknife" derrick type. This type of rig allows the derrick to be assembled on the ground, and then raised to the vertical position using power from the drawworks, or hoisting system.

What is the difference between a mobile rig and a jackknife?

For example, the derrick of the rig, figure (2), is assembled at the location where the drilling will take place. In contrast, mobile (movable) rigs refer to those in which the drilling systems are mounted on wheeled trucks, figure (3), and they come in two different types, jackknife and portable mast.

What is a jackknife derrick rig?

Sometimes called a jackknife derrick rig. When assembling this rig, the outside structure, made of prefabricated sections, is joined together with large pins. The engine and derrick sections are put into position and pinned together by the drilling crew. Next, the drawworks and engines are put in place.

What are the different types of drilling rigs?

There are many different types of drilling rigs. Which rig selected depends on the specific requirements of each drill site. Rigs are generally categorized as onshore (land) or offshore (marine). Onshore rigs are all similar, and many modern rigs are of the cantilevered mast, or "Jackknife" derrick type.

How do land drilling rigs work?

The most common arrangement for a land drilling rig is the cantilever mast (sometimes called a jackknife derrick) which is assembled on the ground then raised to the vertical position using a power from the draw works (hoisting system). These structures are made up of prefabricated sections which are fastened together by large pins.

What are oil well drilling rigs?

Oil well drilling rigs are mechanical structures that are used to make holes in the ground in order to reach a predetermined hydrocarbon reservoir (i.e. a subsurface storage where oil and/or natural gas accumulate). They come in different types and structures. They are also classified based on different criteria.

Rotary drilling rigs can be classified as land rigs and marine rigs. The main features of land rigs are portability and maximum operating depth. Land rigs are built so that the derrick can be ...

Workover Rigs helps in drilling where a hole has already been dug. We have in stock Workover Rigs for both onshore as well as offshore Workover purposes ...
