What type of rock is used for foundation drilling?

When it comes to foundation drilling applications, encountering hard rock formations is not uncommon. These formations present unique challenges and necessitate specific strategies and tools for effective drilling. Known for its hardness and density, granite is a common igneous rock encountered in foundation drilling.

What is foundation drilling?

Foundation drilling can come in many forms, utilized for both new projects and existing structures. The most common use of foundation drilling is generally for new construction projects that require foundation piles, piers, or caissons to be placed deep into the ground for maximum load-bearing capability underneath the foundation's main body.

What equipment do you need for deep foundation drilling?

Learn more. ROC Equipment provides deep foundation drilling equipment for rent or purchase. Oscillators, rotators, reverse circulation drill rigs, heavy duty cycle cranes, casing and more to support your drilled shaft and CIDH projects.

What are the different types of foundation drilling?

There are different types of foundation drilling, each with its own equipment to perform the work. The three basic drilling techniques are Kelly Bar Drilling Rigs, CFA and Displacement Drilling Rigs, and Micro-Pile Drilling Rigs. Let's take a closer look at each kind. The Kelly bar is an integral component of many drilling rigs.

How does a foundation drill work?

Compressed air is pumped through the bit to help break up and remove rock as the bit rotates and impacts rocks in its path while simultaneously pumping drill cuttings out of the hole and up to the surface. Foundation Drilling Equipment

Why do you need a foundation drill rig?

A solid foundation can withstand the effects of natural forces, such as earthquakes, ground movements, and changes in soil moisture, without compromising the structural integrity of the building or infrastructure. Equipping your foundation drill rigs with the right cutting system ensures efficient drilling and minimizes downtime.

The flushing drill fluid rises inside the drill rod and brings the drill cuttings to the surface. This technique can be used for soil or rock drilling. Down-the-Hole ...
