

Mr charlie drilling rig

What was the first offshore drilling rig?

The first transportable, submersible, and self-sufficient offshore drilling rig was the Mr. Charlie, as declared by the American Society of Mechanical Engineers (ASME). The vessel was capable of drilling more than 200 oil and gas wells along the Gulf Coast between 1954 and 1986.

When was Charlie rig built?

He was the first transportable, submersible, offshore, drilling rig and an industry springboard to the current offshore rig technology. Mr. Charlie was built in 1952 and finished in 1954. In 1954 he went to work for Shell Oil Company, drilling a new field in East Bay, near the mouth of the Mississippi River.

How did Mr Charlie change the offshore oil industry?

Mr. Charlie revolutionized the offshore oil industry and led to the technology currently being used around the world. This historic and renowned structure now continues in a new role, teaching others about an industry that changed the world; the offshore oil industry. 111 First Street, Morgan City, LA 70380

Why did Charlie Laborde create a barge?

Navy World War II veteran Alden 'Doc' LaBorde, who believed a self-sufficient oil rig could be placed on a barge for deeper offshore drilling, originated the Mr. Charlie offshore drilling rig in 1954. The design and technology of this rig would later be declared a mechanical engineering landmark.

What happened to Mr Charlie & what did he do?

Mr. Charlie was capable of drilling wells in water depths up to 40 feet and had a prolific career lasting nearly 4 decades. He revolutionized the offshore oil industry in the Gulf and world-wide. He was retired in late 1986 when drilling activity headed into water deeper than he was built for.

When was Mr. Charlie completed?

Mr. Charlie's construction began in 1952 at Alexander Shipyards in New Orleans and was completed in late 1953. Mr. Charlie drilled hundreds of wells -- a cumulative 2.3 million feet up and down the Gulf Coast for Shell Oil, as well as many other oil companies.
