Why do drilling operators need a new index based on rock properties?

However, drilling operators always change drilling parameters to achieve higher drilling efficiency. Hence, a new index that is only related to rock properties and can be successfully applied under different drilling conditions should be developed to define rock properties.

Does rotary non-percussive drilling cause rock failure?

According to the analysis on the SE values at different drilling conditions in rotary non-percussive drilling, the rock failure before the bit is more related to rotary shear than the axial force. Table 2. Calculation of SE based on different drilling parameters in the field test.

How do length and diameter impact drilling performance?

How the length and diameter impact drilling performance. The length and diameter of drill rods play a pivotal role in drilling performance. Longer drill rods extend the drilling depth capability, enabling operators to reach deeper strata.

How to determine the optimal drilling conditions?

The optimal drilling conditions can be obtained by the modified SE model. A index that only related to rock properties was proposed to define the rock strength. Fundamental rock-drilling studies are aimed at optimizing the drilling efficiency by identifying the optimal drilling conditions and rock drillability.

How can drilling mud improve bit penetration?

Use of synthetic fluids in drilling muds also improves bit penetration.²¹ The drilling mud provides a conduit for removing the cuttings developed by shearing rock into a hole. Another time-saving strategy involves well design utilizing smaller bore holes enabling drilling smaller diameter holes with smaller drill bits.

Does high ROP imply high drilling efficiency in practical engineering?

Note that high ROP does not imply high drilling efficiency in practical engineering because high ROP accelerates the wear of the drilling bit, thereby prolonging the drilling time. Furthermore, the drilling operators possess a few constraints in selecting the correct ROP parameters to optimize the drilling efficiency.
