What is land rig installation simulation training system?

Introduction Land rig installation simulation training system is developed by Southwest Petroleum University and Chengdu Esimtech Petroleum Equipment Simulation Technology Exploitation Co, Ltd. It is a system with advanced technology and complete functions which can satisfy the training requirements of oilfield companies.

What is a drillsim simulator?

This simulator is fully customizable to emulate specific land rigs and equipment, allowing operators to practice in their real-life environments. The DrillsIM:600 is an advanced cyberbase simulator that offers unique drilling and well control training.

How does a rig simulator work?

It utilizes an LCD or LED screen to present real-time 3D animations and realistic sound effects that simulate the rig floor, providing an immersive training experience. This simulator is an effective tool for teaching drilling operations and preparing students for real-world scenarios in the oil and gas industry.

What is drilling simulation training?

The drilling simulation training system replicates genuine equipment and operations on an actual production site, encompassing all hardware systems, panel configurations, operating procedures, and parameter displays.

How does a land rig system work?

The system adopts high fidelity animation to display the whole process of land rig (exactly as the installing procedure of real land rig). The system uses hardware emulation to train students the operation of derrick and substructure raising and lowering, tripping and drilling.

How do I use a drilling simulator?

Line-up manifolds and the BOP, check fundamental pressures, and start drilling operations on our drilling simulator. Our AI instructor guides you and scores you. During the drilling process, use our drilling simulator to detect a kick warning sign and then run the well through a flow check. Our AI instructor guides you and scores you.
