What is a foundation drill rig?

Special thanks go to the members of the NCCCO Foundation Drill Rig Task Force for their cooperation in the development of this resource. The term "Foundation Drill Rig" covers several differing types of machines for use in the deep foundation construction industry.

How do you approve a foundation drill rig?

Provide the operator with a copy of the working platform approval document, prior to the foundation drill rig accessing the platform. The operator should review and keep the approval, so it is readily available throughout works. Before using another rig, other than the one designed for that platform, verify the rig is suitable for the platform.

What should be done if a foundation drill rig fails?

If the defects noted are found, then the wire rope must be repaired or replaced as required by the manufacturer of the foundation drill rig. Warning devices such as signals, etc. shall be unambiguous and easily perceived. The operator shall have the facility to check the operation of all essential warning devices at all times.

Do I need an exclusion zone for a foundation drill rig?

The exclusion zone must be included as one of the controls for working in the vicinity of a foundation drill rig in the site-specific safety plan. Note: Dedicated Drilling Rigs are not considered to be nor defined as "Cranes" in the US and Canada.

How close should a foundation drill rig be to a powerline?

When operating a foundation drill rig near overhead powerlines the site-specific safety plan must detail the safe working procedures, and the requirements of the minimum clearance distances to be observed. No part of a foundation drilling rig or its load should come closer than 10 feet (3.05 metres) of an energized powerline.

Why do Foundation drill rigs need maintenance?

Regular inspections and preventative maintenance of a foundation drill rig and auxiliary equipment are essential for the safe and efficient operation, and to ensure mechanical integrity of all components. Failure of key components may cause an incident and possible collapse of the rig or its parts.
