

"Bleed-off line" or "blooey line" means a pipe used to discharge materials or release pressure away from a well or pressurized equipment. Source: Oil and Gas Drilling and Servicing ...

The choke control panel. The mud-gas separator. The flare line and flare pit. The trip tank and drill string valves. From this BOP control panel, the ...

The purpose of the gas separation equipment is to remove the gas from the drilling mud so that the mud pumps operate effectively and the gas shall not create a potentially explosive ...

Flare Line Leads from pressure vessel, and is sized according to the pressure rating of the vessel. Contains a backpressure valve that maintains desired pressure on the pressure vessel. ...

The Crown Block as a drilling rig component is a fixed set of pulleys (called sheaves) located at the top of the derrick or mast, where the ...

Choke Manifold / Chokes Here is a choke manifold. Flow gets to it from the BOP stack via a choke line. The manifold usually has two or more special valves that called chokes. Usually well flow ...

How to Effectively Use BOP Choke and Kill Lines? BOP choke and kill lines are crucial in the oil and gas industry. They help control well pressure during drilling. Mastering ...

Understanding BOP Choke and Kill Lines BOP choke and kill lines are crucial in the oil and gas industry. They help control well pressure during drilling. Mastering their use ...

Choke Manifold Before going into the rig accepting for rig choke manifold, we have to identify the choke manifold. The choke manifold consists ...

choke line 1. n. [Drilling] A high- pressure pipe leading from an outlet on the BOP stack to the backpressure choke and associated manifold. During well-control operations, the fluid under ...

Unlock the complexities of drilling rig operations with our comprehensive guide on the Difference Between Choke and Kill Lines. Gain ...

It takes more than the right wire ropes to operate your rigs. It also takes the right knowledge and experience. When you know the ropes - that is, how to choose, use and maintain each of the ...

Poor Boy Degasser or Mud Gas Seperator, located downstream of the choke manifold, is a vertical vessel used

Panic line drilling rig

to separate any gas from drilling fluid during well control ...

Our high-pressure choke and kill manifolds for land rigs reduce excess pressure from a well kick, regulating flow speed and rerouting mud back to the mud system.

Oil & Gas Drilling User's Guide In this full length Offshore Oil & Gas Drilling User's guide, you'll gain valuable insight to help you choose the right wire ropes for your application, how to install ...

Drilling Rig Hoisting System It enable drilling rig to raise and lower working string into and out of well bore. main components of drilling rig hoisting system are: draw works, drilling line, crown ...

2 each kill and choke lines valves Lines connecting the BOP stack to the choke and kill manifold A choke manifold. A flare line connected to the choke and kill manifold Poor Boy degasser.

Drill line In a drilling rig, the drill line is a multi-thread, twisted wire rope that is threaded or reeved through in typically 6 to 12 parts between the traveling block and crown block to facilitate the ...

In the oil and gas industry, the choke and kill manifolds are used in controlling well kick and pressure fluctuations. These necessary pieces of ...

The crew reported that most of the unions and the flex line were leaking. A 1/2-inch hammer union in the line between the manifold and the atmospheric-type "poor-boy" separator was leaking ...

A drilling line is a high-strength wire rope connects the drawworks to the traveling block, playing a critical role in the process of raising and lowering the drill string and several ...

Advancing the Drilling Industry Drilling Line Care, Inspection and Replacement Anything that moves is subject to wear, but much equipment ...

Test Your Knowledge Choke Line Quiz Instructions: Choose the best answer for each question. 1. What is the primary function of the choke line? a) To connect the wellhead to the drilling rig. b) ...

Vent Line The conduit that directs the flow of diverted wellbore fluids away from the drill floor to the atmosphere. Source: API RP 64, Recommended Practice for Diverter Systems Equipment ...

The choke and kill lines provide durable, high-pressure systems for directing fluid flow in normal drilling operations as well as hazardous well control operations.

Kill line is the line connected from kill manifold to NRV. NRV is a non return valve connected with inner manual gate valve and Gate Valve is connect to Drilling spool. the line ...

Panic line drilling rig

Choke-and-Kill Line External conduit arranged laterally along the riser pipe and used for circulation of fluids into and out of the wellbore to control well pressure. Source: ISO 13624 ...

Ensure safety & efficiency with our comprehensive inspection checklist for blowout preventers. Streamline your oilfield maintenance today!

With accumulator bottles isolated, closing unit will be capable of opening the hydraulically-operated choke line valve (if used) plus close the annular preventer on the smallest size drill ...
