

Red Five Ring Screw Air Compressor Cylinder Head

What is a cylinder head in an air compressor?

As the name implies, a cylinder head sits at the top (head) of an air compressor pump. Its purpose is to route air through the compressor and to dissipate heat. Although it is uncommon for a cylinder head to deteriorate with normal use, damage from accidental impacts (such as dropping the unit) would necessitate replacement.

What are champion's compressor Genuine Parts?

WITH GENUINE CHAMPION'S COMPRESSOR PARTS AND SUPPORT SERVICES Champion's Compressor genuine parts, manufactured to design tolerances, are developed for optimum dependability, specifically for Champion compressor systems. Design and material innovations are the result of years of

How do you remove a cylinder head from an air compressor?

DEPRESSURIZE THE AIR TANK. Always depressurize the tank before servicing an air compressor. To do this, open the drain valve and wait until all of the air (and pressure) has escaped. **REMOVING THE CYLINDER HEAD [top]** 1. Remove the manifold cover. Remove the retaining screw. Lift the manifold cover away from the unit. 2.

How do you install a compressor head?

Align the valve plate assembly (and cylinder gasket) with the compressor pump. (The cylinder gasket and the exposed valves should be facing the cylinder-side of the pump.) Align the head gasket with the valve plate assembly. Install the cylinder head. Install the head bolts.

How do you reassemble a compressor pump?

REASSEMBLING THE UNIT [top] 8. Rebuild the compressor pump. Align the cylinder gasket with the valve plate assembly. (The gasket should be seated against the side of the valve plate that contains the exposed valves). Align the valve plate assembly (and cylinder gasket) with the compressor pump.
